

Partner Summary / IC Memo

TravelTrust

Pre-partner meeting memo · aligned with main deck & whitepaper · no new disclosed numbers

Why now (qualitative)

Delay cost (qualitative): fragmented distribution—another quarter without travel-grade fulfillment state is another quarter of recon/dispute drag; ****not**** a performance promise.

Why us

Platform earns fees & take; trip principal isn't our own income;
TTG votes—not trip pay.

Disclosure cadence: published releases + version/env labels
(details: Whitepaper).

Public “upside” line: TTG is ****governance process tooling****, not
trip checkout—****no valuation bars**** in the pack; see ****FAQ #31****.

Why win

Conclusion (qualitative): growth is built from publishable channel pilots plus supply-side fulfillment/DMC readiness on a disclosure cadence—not “volume first, disclosures later.”

Full framing on main deck **slide 12**; this page is an IC outline only.

Key risks (qualitative)

Conclusion (qualitative): key stage risk is whether disclosure cadence, environment labels, and compliance/ops milestones are third-party replayable—not a single “missing feature” bet.

Same rail as Whitepaper (doc **06**) §11 and main deck **slide 11**; IC one-liner only.

Competition & moat

Conclusion (qualitative): the moat is evidence + escrow + disputes at travel-order grain plus switching costs—not rebuilding a generic payment rail.

Full matrix on main deck **slide 13**; this page is an IC outline only.

Key DD questions (public boundary)

Conclusion (qualitative): the public boundary stops at post-meeting read order and quant/legal text under NDA—don't expand verbally into commitments.

Full close on main deck **slide 15**; this page is an IC outline only.

Investment conclusion scaffold (not advice)

Slot A: conviction on long-term travel trust/fulfillment stack demand

Slot B: acceptance of demo-gated disclosure and current-stage risk/reward

Slot C: next step — deeper materials (06/07) and terms only post-NDA + signatures
